

CSP website updates
8/11/26
Kevin Harris

The CSP site and Drive should be configured with the same information so both reflect CSP history and current events, so that they will both be usable as an archive, and a signpost. Outlining this information needs to be ongoing.

Website general issues /ideas

Cover Page out of date.

Suggestions: rotating animated gif w member work. Sidebar / footer with direct links to **member portfolios**, important information like **most current events**, etc.

Should Menu **items / subjects** get their own page? Or just be a subject that to drop down to the linked items, ie. First CSP menu item **about** should not be its own page but a heading for the group of drop down links. As it stands the pages linked to the menu items are less important (and confusing) than the actual information in the drop down list.

About Page: In this way the About Page should be combined with the mission. This will consolidate pages.

Membership page is this up to date as far as the new application schedule?

B of Directors and **contacts**; BoD needs update, add contact page info to should move to Board of Director page, remove contact page.

Advertising page; remove, this already shows up with the journal

Exhibitions page; needs update

Members page: link to members portfolio should be really obvious and primary.

login? What is this for?

Honorary needs update

in memoriam needs update

Programs: Current events and calls needs update. This page is so important needs to be kept up. Should we add DVC retrospectively or just update to exhibitions? Can we add a category of **projects and demos etc** to hold past work such as shared portfolios etc.?

Brief Histories: update, possibly Karen or another at large member can work on this.

Events? Seems random or needs updating

Residencies needs updating.

Publications; The California Printmaker could use an explanation statement; circulation, institutional holders, etc.

exhibition catalogs, and postcards?(we have a lot in storage).

Newsletter; update and reverse order of issues
